

# FOOD CHAIN

This is a simple food chain.

All living things depend on others for their survival. Some of these relationships are called FOOD CHAINS. Can you think of any other food chains.

Plants and animals relate to each other in many different ways.

In this drawing you may find examples of these relationships.

To benefit the trees	To benefit the birds
SEED DISPERSAL  POLLINATION  REMOVAL OF INSECT PESTS	FOOD SOURCE  SHELTER/ PROTECTION  NEST SITES

Choose a bird and explain what it is doing and why?
